COURSE DESCRIPTION: This course is designed for students who are interested in acquiring more knowledge of the field of Vascular and Interventional Radiology. The course will expose students to VIR patient care by participating in lectures, self-directed tutorials and readings, presentations, and assignments. Students will spend the entire rotation in the VIR division.

LEARNING GOALS & OBJECTIVES: At the completion of this clinical rotation students should be able to do the following:
1. Describe the following: the spectrum of diagnostic and therapeutic image-guided interventional techniques; the appropriate sequencing of exams and limitations of diagnostic imaging tests including cost-effectiveness of imaging studies; risks of medical imaging; how common procedures and imaging are performed on patients. (MK5, PC6, SL2).
2. Demonstrate an appreciation of the following: the breadth of medical knowledge necessary for imaging performance and interpretation; the spectrum of caregivers involved in diagnostic and therapeutic imaging areas; the fundamental role and value of imaging to provide timely, accurate and actionable diagnostic information regarding a patient's medical condition; the role of the radiologist as consultant to the clinician and importance of providing detailed clinical information. (MK8, CS1, IP1, IP3, IP4).
3. Describe the indications and appropriateness of imaging studies, and apply interpretive skills to evaluate basic imaging studies. (MK5, MK8, PC2, PL3).
4. Evaluate chest X-ray for technical adequacy, normal anatomy, common, and/or potentially life-threatening abnormalities. (MK1, MK3, PC1, PC2).
5. Utilize the ACR Appropriateness Criteria to determine the most appropriate imaging test for common clinical scenarios (MK5, PL3)

INSTRUCTIONAL METHODOLOGIES & ROTATION ACTIVITIES: Students will be expected to learn and achieve the educational goals and objectives through the following methodologies and activities:
1. Every student will have the opportunity to spend time in the ART IR suite as well as the Main Hospital IR suite.
2. Daily faculty lectures, online materials, radiological anatomy review, AHRQ M&M cases, and given reading materials.
3. Students will present one imaging case to the class to include brief history and physical findings, indication for the imaging, appropriateness of imaging, and discussion of the imaging findings.

PATIENT ENCOUNTERS: Students will be expected to work-up patients with these specified conditions:
1. A wide variety of clinical conditions including acute and chronic, medical and surgical diseases in patients of all ages.
2. Patients undergoing a variety of imaging procedures.

EVALUATION / FEEDBACK METHODS: Students will be evaluated using the following methods:
1. E*Value Clinical Performance Evaluation.
2. Evaluation of student participation in the faculty conferences, US lab, and clinical rotation.
3. Evaluation of student completion of CORE cases and Case of the Month presentation.
4. Performance on two quizzes, one of which is take home.

Will students be expected to participate in call? ☐ YES ☒ NO
