

SLEEPY TIMES

VOLUME 15, ISSUE 8 AUGUST 2021

MESSAGE FROM THE CHAIRMAN: DIVINE INSPIRATION

-SCOTT T. REEVES, MD, MBA

Would it not be nice if we could foretell the future? Many historians would say that the future can be understood by evaluating the past. I hope that is not the case for us as we begin a new academic year. My goal for this year is to successfully get COVID behind me personally and the department.

In April, I went on a fishing road trip in Montana. It was my first plane trip since the beginning of the pandemic and was extremely relaxing. While there, I received some direct divine inspiration as captured in the photo.

On Tuesday morning, August 17, I will be giving our State of the Department address. It will be both in person and over teams. I hope you will come and fill the auditorium. It will be great to review how resilient we were as individuals and a department during the pandemic. We can be excited about the new academic year. Who knows maybe I truly did acquire some ability to predict the future?

FACULTY PROMOTIONS

Dr. Chris Heine

I completed medical school and anesthesia residency at the University of Louisville, followed by a pediatric anesthesia fellowship at Riley Children's Hospital in Indianapolis, IN. The lure of practicing both adult and pediatric anesthesia drew me to Charleston, SC where I spent 6 years as a member of the pediatric general team. After completing a 6-month faculty fellowship, I joined the pediatric cardiac team in the summer of 2020. Throughout the last two years, I've been working on completing my MBA at the University of South Carolina's Darla Moore School of Business, from which I'll graduate in December. I have greatly benefited from having a group of co-workers with a broad range of academic and research interest that have helped me reach my goal of promotion to Associate Professor. For the last two years, I've served as a Malignant Hyperthermia Hotline Consultant and have enjoyed having the opportunity to help providers around the country. Outside of the hospital, I enjoy traveling and spending time with my wife, Alex, and two children, Caroline (Age 5) and Luke (Age 2). Some may also say that I really like Disney.

I'd like to thank Dr. Scott Reeves, Dr. Latha Hebbar, Dr. Scott Walton, Dr. Cory Furse, and Glendda Ross for encouraging and assisting me both clinically and academically over the last seven years. Their dedication towards faculty development was paramount to my success and an enormous asset to our department.

Upon completing my anesthesia residency at MUSC, I joined as a junior faculty member. After a year of clinical experience, I decided to complete a Regional & Acute Pain fellowship. Since that time, I have been a member of the Regional anesthesia and OB anesthesia divisions, and I currently serve as QI director for the regional division. I would like to thank Drs. Hebbar and Reeves for their dedication to the advancement of those in our department. I would also like to thank Glendda Ross for the significant effort she puts in submitting our applications for promotion and generally being our point person for many departmental questions. Last but certainly not least I have to thank Dr. Sylvia Wilson, who continues to be a mentor, for her tireless support and drive in helping not only me personally, but our division as a whole advance.

Dr. Jennifer Matos

Dr. David Gutman

I am very honored and grateful for my promotion to associate professor. During residency, I never pictured myself as an academic anesthesiologist. In the middle of my obstetric anesthesiology fellowship I went on a total of eleven interviews, with ten of them being private practices in California. The one outlier, to this big city slicker, was a medical university in the largely unknown-to-me southern city of Charleston. When recruited originally by Dr. Hebbar, I could not have pointed to Charleston on a map, let alone considered moving and working at Medical University of South Carolina. As it turns out, it has been my best and most rewarding professional decision to date.

I'd like to thank my wife Emma for always being so loving and supportive. She has allowed me to flourish while providing seemingly infinite moral and emotional support. She is an incredible person and mother to our son (Jonas), who is my shining light. I also want to express my gratitude to Dr. Hebbar for recruiting me, encouraging me, and facilitating my academic development. I'd like to thank Dr. Reeves and Dr. Clark for their calm and balanced leadership that has allowed me to focus on being the best academic physician I can be. Lastly, I'd like to recognize all of my colleagues, residents, CRNAs, anesthesia techs, nurses and other support staff who have motivated me and allowed me to pursue a multitude of academic pursuits. You are an inspiration to me daily.

WELCOME TO THE DEPARTMENT!

Dr. Jen Smith

Jen was born and raised in Massachusetts, then moved to Philadelphia and received a BA in biology from La Salle University. From there, she attended medical school at Jefferson Medical College, graduating in 2009. Jen completed her anesthesia residency at the University of Massachusetts and her pediatric anesthesia fellowship at Children's Hospital of Philadelphia in 2014. Since then, she has been working at the University of Massachusetts practicing both adult and pediatric anesthesia. She was the Associate Program Director for the anesthesia residency from 2015-2020 and was the Associate Site Chief of the University Hospital from 2017-2021. She and her husband (Dan) have always wanted to move to South Carolina as this is where he grew up and COVID finally gave them the opportunity to try. They come here with their three children, Declan and Nathaniel (10 year old twin boys) and Aisling (6 years old) and dog, Guinness. They are building a house on James Island and are staying with family in West Ashley for now. They are foodies and love trying new restaurants. They are excited to leave cold winters behind and enjoy more year round outdoor living!

Pritee was born and raised in Mumbai, India. She did her Anesthesia residency once in India and then again at Henry Ford Hospital, Detroit MI. She attended the Mayo Clinic in Rochester, MN for her Critical Care Fellowship. After 5 years in the Midwest, she was looking for weather closer to home in Mumbai. This search brought her and her family to Charleston and MUSC. She moved here with her husband Sarthak Joshi and her two-month-old son Ivaan. Other than medicine, Pritee enjoys travelling, food and hiking.

Dr. Pritee Tarwade

Savannah Crocker, M.Ed.

Savannah Crocker is excited to join the department as the new Medical Student and Regional Fellowship Program Coordinator. Savannah lived in five states growing up but calls the Rock Hill/Charlotte area home. She attended the College of Charleston as an undergraduate and received her BA degrees in Communication and Women's and Gender Studies. She worked in large-scale corporate event planning before returning to the College of Charleston and working with first-year retention programs and academic standing. She went on to earn her Master of Education in Higher Education Administration from Louisiana State University (geaux tigers!). Savannah and her fiancé Jason have two precious pups, Sullivan and Bella, who are a giant ball of energy and keep life interesting. In her free time, you can find her soaking up the sun at the beach or baking sweet treats.

Candace Gosnell, DNAP, CRNA, was born and raised in southern Mississippi until she moved to Birmingham, AL to attend Samford University for her BSN. After three years of working in the CCU, the Republic of Congo, and CVICU as a registered nurse, she returned to Samford University to complete a Masters of Science in Nurse Anesthesia. After living in Birmingham, AL for almost ten years she and her husband settled in Chattanooga, TN, where Candace worked as a CRNA in the areas hospitals and a surgery center. Candace recently graduated from Missouri State University with a Doctorate of Nurse Anesthesia Practice. Candace, her husband Nelson, and young son Findlay have recently relocated to Charleston. When Candace is not at work you can likely find her spending time with her family (to include her dog and cat), traveling, spending time outdoors, or seeking delicious cuisine.

Candace Gosnell, DNP, CRNA
Rutledge Tower

DENISE SMALLS—OUR FIRST CERTIFIED PAIN NURSE!

“I am excited to announce that Denise Smalls is our first pain certified nurse! She continues to lead our nursing group and play an integral role in the growth and development of our pain practice. She has also recently started the MUSC DNP program. Congratulations Denise and thanks for all you do!

-Gabe Hillegass, MD

**WELLNESS WALKS BY CARLEE CLARK, MD**

The July wellness walk was a success, but kind of sweltering. We had several of the department kiddos on the walk, which made it extra special and we made it a whole 3 miles! If you haven't made it to the West Ashley greenway, you should check it out. Our next walk will be at the Pitt Street bridge in Mount Pleasant. Not a long walk, but a great place for those with kiddos to join. Plan to meet us there on Saturday, August 21st at 8:30am!

NEW BABY IN THE DEPARTMENT

Trey Hiott and family welcomed Bates Andrew Hiott on July 15th. He weighed 6lbs, 15oz and was 19.5 inches long!

GERIATRIC UPDATE BY JULIE MCSWAIN, MD

In October 2020, I assumed the role of Chair for the ASA Committee on Geriatric Anesthesia as well as Co-Chair (along with Dr. Carol Peden) for the Perioperative Brain Health Initiative (PBHI). I wanted to update the department on some of the exciting work products that the committee has produced as well as some that will be coming out in the next several months. The committee recently put together (with ASA sponsorship) a podcast entitled 2021 Perioperative Geriatric Care State of the Union. This one-hour podcast highlights very practical implementation strategies for frailty assessment, prehabilitation, and establishing/leveraging multidisciplinary perioperative care of the geriatric patient with the leading North American experts in their respective fields. The podcast is on the front page of the PBHI website at <https://www.asahq.org/brainhealthinitiative> if you are interested in viewing.

In addition, the ASA has graciously provided us with amazing resources to create a frailty toolkit website. This website will be accessible initially to any ASA member through the ASA's homepage and provides information, instruction (via interactive infographics), and case examples to assist anesthesiologists in selecting and implementing frailty screening into their practice. This has been a very exciting project, and I am very grateful to the ASA Executive Committee who has supported us and expedited our proposal through the necessary channels. The website is in the final stages of being built, and we are expecting to launch prior to the ASA's national meeting in October. In addition, we will be producing a podcast to explain and promote the website hopefully by August/September. I will be sure to email the department when these two products launch. The Perioperative Brain Health Initiative will also be launching a podcast to discuss their recent publication in the *British Journal of Anesthesia* (6 Simple Steps to Reduce Delirium). The key findings of this consensus statement can be found on the homepage at <https://www.asahq.org/brainhealthinitiative> if you are interested in more detail.

Also, be on the lookout for a two-part series on introducing the concept of the Age-Friendly Health System in the *ASA Monitor* in the next couple of months. This series will introduce the concept of the Age-Friendly Health System designation and how anesthesiologists can be key stakeholders in developing and promoting Age-Friendly Health designation at their own institution.

Finally, after a 3-4 year wait in "the queue," the ASA Guidelines and Practice Parameters committee has finally approved the commission of the first ever ASA guidelines for the care of the geriatric patient. I have been appointed to the task force and we begin meeting this July with the goal of publishing in the next 12-18 months in *Anesthesiology*. With so many different consensus statements and guideline proposals by various groups on the perioperative care of the geriatric patient, I hope this practice statement will streamline and make decision making a little easier for practicing anesthesiologists.

Feel free to email me or stop me in the hallways if you would like any more information on these topics or if you have any ideas for the committee as future work products.

MUSC SJCH ONLY CHILDRENS HOSPITAL IN SOUTH CAROLINA TO BE RANKED BY THE US NEWS AND WORLD REPORT

Charleston, S.C. (June 16, 2021) – New rankings from U.S. News & World Report’s (USNWR) 2021-22 Best Children’s Hospitals survey place the MUSC Shawn Jenkins Children’s Hospital once again as the only children’s hospital in South Carolina to be ranked. The latest rankings are published online and come as the health care community continues to manage the ongoing coronavirus pandemic and vaccine efforts.

The leading specialties for MUSC Children’s Hospital include the following rankings: No. 12 for cardiology and heart surgery, No. 30 for nephrology, No. 42 for gastroenterology and GI surgery and No. 44 for cancer. USNWR issues the annual rankings “to help families with complex and rare conditions find the best medical care for their children,” according to the publication’s website. They’re designed to steer parents and caregivers to the hospitals that are best equipped to treat their children.

The 15th annual rankings highlight the top 50 U.S. pediatric hospitals in each of 10 specialties: cancer, cardiology and heart surgery, diabetes and endocrinology, gastroenterology and GI surgery, neonatology, nephrology, neurology and neurosurgery, orthopedics, pulmonology and urology.

“The U.S. News rankings indicate that MUSC Children’s Health is a viable regional and national choice for parents seeking care for their child,” said Mark A. Scheurer, M.D., MUSC Children’s Health chief of clinical services.

“We’re working hard every day to transform the delivery of care to children and women in a safe and healing environment. These rankings are one of many measures that demonstrate what an outstanding team we have at MUSC.”

This is the 14th consecutive year that the 12th-ranked cardiology and heart surgery program has made the overall Best Children’s Hospitals list. Criteria include the survival rate of patients after complex heart surgeries along with the level of specialized staff, services and technologies and the ability to prevent infections.

The nephrology program at the MUSC Shawn Jenkins Children’s Hospital ranks No. 30 in the U.S. That means it excels when it comes to the survival rate of children who have kidney transplants, the management of dialysis and infection prevention and other factors. It maintains its status as the highest-ranked children’s kidney program in South Carolina.

The GI / GI surgery program is no stranger to the U.S. News rankings, either. For the 14th year in a row, it made the grade, coming in at No. 42, one spot higher than last year. The rankings factor in the survival rate for children who have had liver transplants, the effectiveness of the hospital’s treatment of children who have inflammatory bowel issues and other key measures. Like all of the rankings, the GI rankings also include input from specialists in the field who responded to U.S. News surveys and recommend the hospital for serious cases in GI care.

Finally, the MUSC Shawn Jenkins Children’s Hospital’s cancer program ranks No. 44 on the list of Best Children’s Hospitals for Cancer. That’s based in part on the 5-year survival rate for children with leukemia-related cancer, bone marrow transplant services, programs for brain tumors and sarcomas and infection prevention.

A critical criterion measured by USNWR is outcomes. Seven of 10 MUSC Shawn Jenkins Children’s Hospital programs ranked in the top 50 nationally for the outcomes portion of their respective survey, including:

Heart	#4
Nephrology	#14
Cancer	#15
Neurology / Neurosurgery	#26
GI / GI Surgery	#38
Orthopedics	#48
Pulmonary	#49

New this year, U.S. News featured regional rankings, and MUSC Shawn Jenkins Children’s Hospital tied at #12 for the Southeast region, which is one of the most competitive pediatric regions in the country. Five of MUSC’s pediatric specialties ranked in the top 10: cardiology and cardiac surgery #2, nephrology #4, GI & GI surgery #7, cancer #8 and neurology and neurosurgery #10.

MUSC SJCH ONLY CHILDRENS HOSPITAL IN SOUTH CAROLINA TO BE RANKED BY THE US NEWS AND WORLD REPORT

Current methodology combines clinical and operational data, results from a reputational survey of board-certified pediatric specialists and supplemental information from resources such as the National Cancer Institute. RTI International collects and analyzes the data for the rankings. The methodology reflects clinical outcomes, such as patient survival, infection rates and complications; the level and quality of hospital resources directly related to patient care, such as staffing, technology and special services; delivery of health care, such as programs that adhere to best practices and prevent infections; and expert opinion among pediatric specialists.

"Our MUSC Shawn Jenkins Children's Hospital care team members continue to be recognized for the outstanding care they provide, even in challenging times," said Patrick J. Cawley, M.D., MUSC Health CEO and vice president for Health Affairs, University. "The strength of our specialty outcomes is a testament to the quality of care our team members seek to provide to patients and their families on a daily basis."

US News and World Report on Pediatric Heart Program Eric Graham

Once again, our Pediatric Heart Program is ranked among the best in the country by US News and World Report at #12! This represents the 14th consecutive annual ranking and we have been ranked every year since inception. Most importantly we were ranked #4 in the country for our outcomes portion of the survey and #2 overall in the Southeast. You can review more data at the attached link: <https://health.usnews.com/best-hospitals/pediatric-rankings/cardiology-and-heart-surgery>

Interestingly this year's report was based on very little new information and no new outcome data. The STS recently changed statistical support vendors and haven't released a new report since 2019 but hopefully will soon. They also removed the start rating system (but you can still determine this by the observed/expected ratio <1 with a 95% confidence interval not crossing 1): <http://publicreporting.sts.org/chsd>

You'll see our overall 4 year observed mortality is 1.5% (expected 2.7%). Although a 1.2% difference may not sound like a lot it's almost a 45% reduction. To put this in perspective, we perform over 400 cases a year if we were average or performed where we were expected - 19 children would not have survived their cardiac surgery over this 4-year span. What is really amazing is our STAT 5 (the highest risk operations) mortality is 5.2% - expected 14.1% with an STS average of 13.9% (over twice ours!!). In addition to the outstanding survival, our length of stay is lower than the national average for all 10 benchmark operations!

This is a wonderful tribute to our entire group and to our truly amazing statewide team! Without all of your contributions this would not be possible. We should all be very proud.

My best,

Eric

MUSC RANKED STATES #1 HOSPITAL SEVENTH YEAR IN A ROW

U.S. News & World Report releases annual national rankings

CHARLESTON, S.C. (July 27, 2021) - MUSC Health University Medical Center in Charleston was named by U.S. News & World Report for the seventh year in a row as the No. 1 hospital in South Carolina, with three of MUSC Health's specialty areas ranking among the best in the entire country: ear, nose and throat; gynecology and cancer.

Seventeen other MUSC Health programs are considered "high performing" specialties, procedures or conditions in the 2021-2022 U.S. News & World Report rankings: gastroenterology and GI surgery, abdominal aortic aneurysm repair, aortic valve surgery, heart attack, heart bypass surgery, heart failure, back surgery (spinal fusion), hip replacement, kidney failure, chronic obstructive pulmonary disease (COPD), lung cancer surgery, pneumonia, stroke, colon cancer surgery, rheumatology, orthopedics and urology.

In addition, MUSC Health Florence Medical Center is designated as "high performing" in chronic obstructive pulmonary disease (COPD), heart failure, heart attack and kidney failure.

"Once again, South Carolinians can take great pride and comfort in the knowledge that their only public, statewide hospital system is consistently cited as one of the best in the country," said Patrick J. Cawley, M.D., MUSC Health CEO and MUSC vice president for Health Affairs, University. "It's a transformational time in health care and these rankings are a testament to our care team's commitment to ensure that our patients are receiving the right care, in the right place and at the right time. The achievements in our Charleston and Florence divisions made despite the pandemic should remind us all what's possible through innovation, teamwork, and growth."

U.S. News & World Report unveiled the 32nd edition of the Best Hospitals rankings at [health.usnews.com/best-hospitals/rankings](https://www.health.usnews.com/best-hospitals/rankings). Designed to help patients with life-threatening or rare conditions identify hospitals that excel in treating the most difficult cases, Best Hospitals 2021-22 includes consumer-friendly data and information on 4,750 medical centers nationwide in 15 specialties and 17 procedures and conditions. In the 15 specialty areas, 175 hospitals were ranked in at least one specialty. In rankings by state and metro area, U.S. News & World Report recognized hospitals as high performing across multiple areas of care.

"I am so proud that U.S. News & World Report has recognized MUSC Health Florence Medical Center as high performing in four areas — chronic obstructive pulmonary disease (COPD), heart failure, heart attack and kidney failure," said Jay Hinesley, MUSC Health Florence Division CEO. "The last year has been a challenge for everyone in health care, and these recognitions are a true testament to all the hard work of our care team members and their dedication to our patients, families and communities. We are committed to continuing to preserve and optimize human life in South Carolina and beyond."

The U.S. News & World Report Best Hospitals methodologies, in most areas of care, are based largely or entirely on objective measures such as risk-adjusted survival and readmission rates, volume, patient experience, patient safety and quality of nursing, among other care-related indicators.

"This year's expanded report from U.S. News includes new ratings for important procedures and conditions to help each patient pick the right hospital for the type of care they need," said Ben Harder, managing editor and chief of health analysis at U.S. News. "Hospitals faced incredible challenges this past year, and the best of them have provided great care throughout the pandemic and continue to offer excellent care today."

U. S. News & World Report's produced Best Hospitals with RTI International, a leading research organization based in Research Triangle Park, N.C.

REVISED UNIVERSITY GUIDELINES FOR COVID 19

The Provost as of May 5, 2021, has updated the university guidelines for COVID 19 which were posted yesterday.

The link to the whole document can be found at:

<https://web.musc.edu/coronavirus-updates/leadership-update-july-1>

Please take a few minutes to review the information. These guidelines are being modified due to the significant positive effect that the COVID vaccines are having on diminishing transmission and infections on campus, across our state and nation. Members of the department are substantially vaccinated, and we have stated a return to in person events such as departmental grand rounds.

I will summarize a few important points with some comments.

1. Keeping social distancing, wearing mask while inside and in large groups and cleaning our work services after use remains important.
2. People are considered fully vaccinated for COVID 19- 2 weeks after receiving the second dose of the Pfizer or Moderna vaccines and 2 weeks after receiving the single dose Johnson and Johnson vaccine
3. Students/residents/faculty need to continue to wear mask during our large in person in door educational events.
4. Social distancing of at least 3 feet is recommended indoors. This is a decrease for the previous 6 feet guideline.
5. If at least 90% of people in small indoor settings are vaccinated a mask need not be worn. I find this the trickiest change. I simply ask folks if they have been vaccinated when they meet with me. If so, you don't need to wear a mask.
6. Masks are not required outdoors while anywhere at an MUSC worksite.
7. Domestic travel: University sponsored domestic travel is now permitted with approval from the supervisor, program director and/or department chair. I know that is a welcome change. Unfortunately, most national meetings are still happening in a virtual only format. I suspect this may change as we enter our new fiscal year which starts on July 1. Faculty should place their meeting request into spin fusion. Faculty approval will occur based on the departmental priority system i.e. presenting, on committees, etc.
8. International travel is still prohibited.

MUSC is making significant progress as the campus becomes substantially vaccinated allowing us to reduce our restrictions. More information will be forthcoming regarding our patients and their visitors.

Despite what is happening at MUSC, I would encourage us all to continue to wear a mask when out in public in indoor spaces. Leading by example in grocery stores, restaurants etc. hopefully will encourage an increase in community vaccination rate. Please seriously consider talking again to resistant family and friends. Please consider vaccinating your children when their age group is approved. Each vaccinated person moves us closer to ending this pandemic.

Sincerely,

Scott T. Reeves, MD, MBA

ANNUAL RIVERDOGS DEPARTMENT EVENT

**Please join us for the Anesthesia Department's
New Resident and Fellow Welcome Celebration**

Saturday, August 21 at 5:00 p.m.

360 Fishburne St., Charleston, SC 29403

***Charleston Riverdogs
Baseball Game***

Tickets, BBQ, and beer will be provided.
Families and kids are welcome to attend!

Please RSVP by August 13

I HUNG THE MOON

Please don't forget to nominate your co-workers for going 'Beyond the Call of Duty.' I Hung The Moon slips are available at the 3rd floor front desk and may be turned in to Tammie Matusik or Mary Chiappardi.

Presented to Mary Chiappardi. Thank you for taking me around and showing me places as I get familiar with my new work environment. You didn't have to but you were so kind to offer your time and go beyond your duty. Thank you! - Mila Brooks

I would like to thank Kim Pompey, Mary Chiappardi and Tammie Matusik for helping out Education Office with procurement. They have been an enormous help to us during an exceptionally busy time of year. We appreciate their willingness to help so very much! These three women are superb examples of what it truly means to be a team player! Thank you so much! - Elizabeth Morrison, MSM

Presented to Janine Kovach, CRNA for volunteering to stay late to finish her OR case when multiple emergencies came in. Thank you for stepping up! - Aaron Huber, CRNA
