1

2

Outline

- p16
- PDL1 CPS
- Potentially actionable somatic alterations
- Future biomarkers

Challenge

- The clinical care of SCCHN has largely not been influenced by clinical biomarkers until recently
- p16 – prognostic with some efforts related to de-intensification (E3311)
- Paucity of driver oncogenic mutations
- PDL1 CPS is an imperfect biomarker but has proven to help guide treatment selection
- Locally advanced disease – still need more robust biomarker to drive treatment discussions.
- **GOAL – to better identify treatment paradigms based on biomarker selection to improve the outcome for our patients.**

3

4

HPV

- Viral genes are encoded on one strand of the double-stranded circular DNA genome and enclosed in capsid (L1, L2)
- Infection – Stable episome
- E6/E7 – stimulate cell cycle progression for viral replication

Doorbar. Clinical Science (2006) 110, 525–541

5

Model of HPV+ HNSCC Development

HPV-E6 downregulates the p53 pathway, followed by sequential upregulation of p16 (Au Yeung et al., 2010)

HPV-E7 inactivates tumor suppressor Rb (Wang et al., 2001)

6

Recurrent/Metastatic Disease

- HPV is also a prognostic factor for R/M disease

RTOG Analysis

Survival (%)

Time Since Progression (years)

ABSTRACT
POSITIVE MARGINS
≥1mm ENE OR
≥5 METASTATIC LN

Presented by: **Robert L. Ferris, MD, PhD**

Presented by Robert Ferris at TSD

Results

	N	2-year PFS	90% CI	Deaths (without recurrence)	Recurrences	LRF	DM
Arm A	37	93.9%	87.3, 100	0	2	1	1
Arm B	102	95.0%	91.4, 98.6	1	4	2	2
Arm C	104	95.9%	92.6, 99.3	0	4	0	4
Arm D	110	90.5%	85.9, 95.3	3	7	4	3

- There were 2 treatment-related deaths (one surgical and one Arm D)
- TOS + low-dose radiation is worthy of further study, since the primary endpoint of the upper bound of the 90% CI (in the intermediate risk group) exceeding 85% was met

presented at: **2020 ASCO** ANNUAL MEETING

presented by: **Robert L. Ferris, MD, PhD**

Chera et al, JCO 2020

Outline

- P16
- **PDL1 CPS**
- Potentially actionable somatic alterations
- Future biomarkers

19

TPS vs. CPS

- TPS – the percentage of tumour cells with membranous PD-L1 expression.
- CPS - the number of PD-L1-positive cells [tumor cells, lymphocytes, and macrophages] divided by the number of tumor cells times 100.
- scores ranged from 0 to 100
- a cut-off of ≥ 1 is used to define the PD-L1 express

20

PDL1 and ORR in KN012

Scoring Method	Expression Status	Number (%) positive	Responders/total n	ORR (%)	P value
TPS	PDL1 +	123 (65%)	22/123	18	0.023
TPS	PDL1 -	65 (35%)	12/65	19	
CPS	PDL1 +	152 (81%)	32/152	21	
CPS	PDL1 -	36 (19%)	2/36	6	

Mehra et al. Br J Cancer. 2018 Jul 17; 119(2): 153–159

21

OS Benefit Across PD-L1 Expressors and Non-Expressors

- OS rates at 18, 24, and 30 months were similar in both groups
 - PD-L1 expressors: nivolumab continued to provide OS benefit, with 45% reduction in risk of death vs IC
 - PD-L1 non-expressors: nivolumab resulted in 27% reduction in risk of death vs IC

Never smoker	0.77 (0.45-1.30)
Former smoker	0.71 (0.49-1.02)
Current smoker	0.71 (0.49-1.03)

- 1) No selection based on CPS/PDL1
- 2) Benefit of nivolumab observed in all comers
- 3) CPS not strongly correlated with DFS

Case

- T4N2M0 p16+ SCC left tonsil, L>R BOT - treated with chemoRT with 35 fractions protons and concurrent weekly cisplatin - C5 dose reduced due to neutropenia. C7 held - completed 8/20/24
- 9/2/25 - had CT imaging which is concerning for metastatic pulmonary disease and multiple liver mets
- PDL1 CPS 5

Outline

- P16
- PDL1 CPS
- Potentially actionable somatic alterations
- Future biomarkers

Mutational Spectrum in HPV(-) vs HPV(+)

31

TCGA

- HPV+ disease is distinct from tobacco/alcohol associated cancer

32

Tumor Genomics In Recurrent Head and Neck Cancer Patients

33

The Relation Between Mutations and Response

- TP53, SOX2, FGFR4, and TERT mutations linked to poor treatment response
- MYL1, AXIN1, ASXL1, and FLCN mutations are associated with better outcomes

P-values were calculated by the Fisher's exact test

41

42

43

44

Conclusions

- p16 and PDL1 CPS are currently clinically validated biomarkers
- Future trials with immunotherapy, especially in the locally advanced setting should incorporate PDL1 CPS
- Future directions include incorporating genomic and radiomic biomarkers in patient treatment selection especially in the locally advanced curative setting.
- ctDNA will be a useful biomarker to utilize in future studies
